

# OpenTM2 version 1.3.1 released

Dear Community,

OpenTM2 development team is proud to release the latest version of OpenTM2.

## Fuzzy Segment Search

Main new feature in this release are improvements of the "Fuzzy Segment Search" function. This function gives you the opportunity to find all Fuzzy-Matches of an OpenTM2 project:

- You can jump to each match from the search window to the corresponding document, take over and adjust the segment
- You can export the list of matches
- And you can define, which matches to search:
  - Matches with only white-space differences
  - Matches with exact 1 word difference, or exact 2 words difference, etc. - up to exact 6 words difference
  - Matches with 1 or less words difference, or 2 or less words difference etc. - up to 6 or less words difference

## Fixes

In addition a number of bug fixes have been made.

## Change list

As always, you'll find the complete list of changes in our [github repository](#).

## Auto-update & Download

With this version, auto-update is working again. So every OpenTM2 user with OpenTM2 1.3.0 installed will be able to use the auto-upgrade function of OpenTM2.

OpenTM2 users of previous versions will have to [download OpenTM2 manually](#). For manual update, [just download the installer](#) and execute it with your old version still installed, but closed.

Have fun with OpenTM2!
