

German Localization Unconference - this year with Open Source track. Hope to see you there!

This years Localization Unconference will take place at the 23./24. of June in Heidelberg area/Germany at SAP offices and Dezernat 16.

As usual for an Unconference, the topics will be decided by the participants in a highly structured moderated way in the beginning of the day.

The first day of the unconference will host a Hackathon, a Translathon and the Open Source track.

Open Source track

The goal of the Open Source track is to bring together companies and projects interested on working on community Open Source in translation industry.

The topics probably will cover anything related to using and developing Open Source software in the translation industry:

- interconnecting different tools and projects
- establishing more complete Open Source solutions
- discussing feature needs
- discussing ways to cooperate on development between projects and companies
- and anything else the participants want to

We hope to see many OpenTM2 users and OpenTM2-using companies at the Unconference! Looking forward to shape the Localization Open Source community with you!!!

Translatathon and the Hackathon

The Translatathon and the Hackathon will again provide coders and linguists with an opportunity to demonstrate their skills all while making meaningful contributions to the pro-bono projects Kamusi and Rosetta Foundation and possibly others.

Second day: Main unconference

This is the localization unconference proper, with its purely participant-driven agenda format.

Information and registration

All information you'll find here:

<https://sites.google.com/site/localizationunconference/>

Please register soon, as we should know about the number of participants.

The conference participation is free of charge.

Hope to see many of you in Heidelberg!!!
